

Brushed Stainless Steel Strips

Ningbo Qihong Stainless Steel Co., Ltd. is specialized in stainless steel strips, brushed stainless steel strips is one of hot products. In addition to this, we also offer wholesale of various stainless steel strips, our quality, excellent Bending, Cutting processing technology price and customized service have been highly praised by our customers. We look forward to becoming your long-term partner in China.

Brushed stainless steel strips generally have several effects: straight silk pattern, snow pattern, nylon pattern. The straight wire pattern is an uninterrupted pattern from top to bottom. Generally, the workpiece of the fixed wire drawing machine can be moved back and forth. The snow pattern is the most popular one, consisting of a little bit of regular dots, which can be achieved with worm sandpaper. The nylon pattern is composed of lines of different lengths. Because the nylon wheel is soft, it can grind uneven parts to reach the nylon pattern.

Stainless steel wire drawing is very particular about procedures and processes. Generally, the wire drawing machine is used to repair and restore the scratched position and weld seam of the product, and finally achieve the overall artistic effect of wire drawing.

Product Parameter (Specification)

Material	304 316 301 310 430 201 400 420 421
Surface	NO. 1, NO. 4, 2D, 2B, BA, 6K, 8K, Mirror, etc
Thickness	0.02mm-4.0mm/Customized
Length	200-3500 mm or customized
Width	2-1500 mm or customized
Standard	ASTM, JIS, GB, AISI, DIN, BS, EN

Certifications	SGS ISO9001
Packing	Industry standard packaging or according to client's requirement
Brand	TISCO, POSCO, BAO STEEL, TSINGSHAN, QIYI STEEL etc .
Payment terms	L/C, T/T
Delivery time	Up to order quantity, contact us to know

Product Feature And Application

Stainless steel brushed straight grain board. Usually, the surface state is straight lines after processing by the method of mechanical friction on the surface of stainless steel. The processing process of the wire drawing plate can eliminate the scratches on the surface of the raw material of the stainless steel plate, and also has a good decorative effect. This kind of texture also has long-filament texture and short-thread texture, because this texture is to use scouring pad or stainless steel brush to make straight or short lines on the surface of the plate, and different thickness textures can be obtained by changing the diameter of the steel brush.

Stainless steel brushed random pattern (and pattern) board. The surface sand pattern is composed of a circle of sand patterns from a distance, and the irregular pattern in the vicinity is formed by the irregular swing of the grinding head up and down, left and right, and then electroplated and colored. The surface of this texture is matte, and the production requirements are also very high.

Stainless steel wire drawing corrugated plate. The production process is to use the axial movement of the upper set of grinding rollers on the brushing machine or the rubbing machine, so that the stainless steel surface can be brushed to obtain a wave-like texture.

Stainless steel wire drawing thread plate. Its production and processing technology has some characteristics. First, a small motor is used, and a circular felt is installed on its shaft. The small motor is fixed on the desktop, and the angle of the edge of the table is about 60°. After that, a pallet is made to fix the stainless steel plate, and a polyester film is attached to the pallet along the edge of the pallet to limit the thread speed. In this way, the linear movement of the felt and the mop

can be rotated, and the thread pattern of the same width can be obtained on the surface of the stainless steel plate
